

ANSWERS

1. March 14th
2. because the first numbers of pi are 3.14, and the fourteenth of March can be expressed numerically as 3/14.
3. 3.14159
4. irrational, because it goes on forever in a random sequence
5. Larry Shaw
6. Archimedes
7. π is the ratio of a circle's circumference (C) to its diameter (D). If you know one of these quantities, because the ratio between them is known, it is always possible to find the other.
8. 4,000 years
