

# Scientists that Changed the World

Research a famous scientist and write a paper about how their work had a lasting impact on the world. Consider the following questions:

- Who are they?
- What are they known for?
- When were they born?
- When did they die?
- What was the world like during that time? What were the biggest problems or challenges that people faced? What was the relationship between these things and the work this scientist did?
- What led them to do what they are most famous for?
- How was this person's work received in their own time?
- What do people think of this work today?
- How is the world different because of this person's work?

The conclusion of your explanatory paper should:

- Synthesize the information you have shared in your paper.
- Guide your reader to a new way of looking at this scientist or their work
- Consider broader issues, make new connections, and/or articulate the implications of your findings.
- Give your readers a takeaway that changes the way they see things or gives them a new appreciation for your topic.

Lists at least three credible sources that you used to conduct this research.
