

Climate Change

Research the phenomenon known as climate change.

- What is it?
- How did we become aware of it?
- How long have we been aware of it?
- Are we causing it? What evidence suggests we are? What evidence suggests that we are not?
- What impact is human behavior having on climate change? What is the evidence?
- Why is climate change a political controversy?
- What are the economic impacts of climate change?
- What are the social impacts of climate change?
- What are the agricultural impacts of climate change?
- Are there ways in which climate change can be a positive change? What are they?

After completing your initial research, formulate a focused research question having to do with the human behavior and climate change. Conduct additional, deeper research to answer your research question.
