

# Types of Inductive Reasoning

Inductive reasoning begins with specifics and reasons to something more general. Inductive reasoning can establish correlation and predict things that are likely to be true or which are possibly true, but its conclusions are often not correct.

**DIRECTIONS:** There are six main types of inductive reasoning. Look up each type and write its definition in the box.

<b>Generalized</b>	
<b>Statistical</b>	
<b>Bayesian</b>	
<b>Analogical</b>	
<b>Predictive</b>	
<b>Causal Inference</b>
