## Reduce Fractions

Reduce these fractions to their lowest terms.

$$1. \quad \frac{12}{21} = \frac{4}{7} \quad 2. \quad \frac{36}{60} = \frac{3}{5} \quad 3. \quad \frac{30}{66} = \frac{5}{11}$$

$$4. \quad \frac{42}{70} = \frac{3}{5} \quad 5. \quad \frac{27}{90} = \frac{3}{10} \quad 6. \quad \frac{36}{100} = \frac{9}{25}$$

$$7. \quad \frac{25}{125} = \frac{1}{5} \quad 8. \quad \frac{35}{140} = \frac{1}{4} \quad 9. \quad \frac{49}{210} = \frac{7}{30}$$

Find the total of these fraction and answer in its lowest terms.

$$10. \quad \frac{6}{12} + \frac{3}{12} = \frac{3}{4} \quad 11. \quad \frac{2}{10} + \frac{6}{10} = \frac{4}{5}$$

$$12. \quad \frac{10}{25} + \frac{5}{25} = \frac{3}{5} \quad 13. \quad \frac{15}{63} + \frac{6}{63} = \frac{1}{3}$$

$$14. \quad \frac{10}{36} + \frac{8}{36} = \frac{1}{2} \quad 15. \quad \frac{15}{50} + \frac{5}{50} = \frac{2}{5}$$
