## World Health Day

### Answer Key

#### Correction Marks

The World Health Organization (WHO) is a specialized agency of the United Nations responsible for international public health. Established in 1948 WHO's primary mission is to promote and protect global health and well-being, ensuring that people around the world enjoy the highest possible level of physical and mental health. It plays a crucial role in setting international health standards, monitoring and assessing health trends and challenges, and providing guidance and support to member states in their efforts to improve healthcare systems and public health outcomes.

WHO's work spans a wide range of health-related areas, including disease prevention and control, emergency response to health crises, vaccination campaigns, health policy development, and the promotion of universal healthcare access. It collaborates with governments non-governmental organizations, and other international partners to address pressing health issues such as infectious diseases, maternal and child health, nutrition, mental health, and the management of global health emergencies like pandemics. Through research, technical assistance, and advocacy, the World Health Organization strives to advance the health and well-being of people worldwide, fostering a healthier, safer, and more equitable world for all.
