

Name _____

Animal Cells

Answer Key: Lysosomes and Cell Cleanup

1. Lysosomes are organelles in animal cells involved in cellular cleanup and waste disposal.
2. Lysosomes contribute to the overall health of animal cells by recycling materials, removing cellular waste, and ensuring a clean cellular environment.
3. Lysosomal enzymes break down and digest cellular waste, damaged organelles, and foreign particles.
4. Lysosomes are essential for animal cell function because they help maintain a clean cellular environment and ensure efficient cellular activities.
5. False
