## Simplify Improper Fractions

Subtract three improper fractions and write the answer to its lowest term.

$$1) \frac{10}{3} - \frac{3}{2} - \frac{9}{6} = \frac{1}{3}$$

$$2) \frac{15}{4} - \frac{7}{5} - \frac{5}{4} = \frac{11}{10}$$

$$3) \frac{17}{4} - \frac{5}{2} - \frac{10}{8} = \frac{1}{2}$$

$$4) \frac{44}{7} - \frac{7}{2} - \frac{9}{7} = \frac{3}{2}$$

$$5) \frac{13}{2} - \frac{15}{6} - \frac{5}{3} = \frac{7}{3}$$

$$6) \frac{24}{5} - \frac{15}{10} - \frac{15}{10} = \frac{23}{4}$$

$$7) \frac{19}{3} - \frac{12}{9} - \frac{7}{6} = \frac{23}{6}$$

$$8) \frac{25}{4} - \frac{15}{10} - \frac{5}{2} = \frac{4}{5}$$

$$9) \frac{21}{5} - \frac{12}{10} - \frac{4}{3} = \frac{5}{3}$$

$$10) \frac{25}{4} - \frac{15}{10} - \frac{9}{8} = \frac{29}{8}$$

$$11) \frac{19}{5} - \frac{15}{10} - \frac{3}{2} = \frac{4}{5}$$

$$12) \frac{7}{2} - \frac{7}{4} - \frac{9}{6} = \frac{1}{4}$$

$$13) \frac{19}{4} - \frac{10}{8} - \frac{5}{2} = \frac{1}{1}$$

$$14) \frac{17}{3} - \frac{15}{9} - \frac{10}{6} = \frac{7}{3}$$
