

Name _____

Answer Key: California Wildfires

1. The Santa Ana winds in California can turn a small spark into a raging wildfire during the fall season.
2. The wildfires in California destroyed many homes, and people had to evacuate to safety.
3. The wildfires burned the forests and harmed the animals that lived there. They also caused air pollution due to smoke.
4. People faced challenges due to the smoke, which made it difficult to breathe, even for those far from the flames.
5. The people of California came together to support one another by planting new trees, helping injured animals, and rebuilding their communities.
