Name _____

Ordering Fractions

Order the fractions with the same numerators in decreasing order.

Remember: When fractions have the same numerator, just compare denominators. The bigger the denominator, the smaller the fraction.

$$\frac{2}{7} > \frac{2}{9}$$

1) $\frac{5}{18}, \frac{5}{7}, \frac{5}{21}, \frac{5}{9}, \frac{5}{13}$ → $\frac{5}{7}, \frac{5}{9}, \frac{5}{13}, \frac{5}{18}, \frac{5}{21}$

2) $\frac{9}{19}, \frac{9}{15}, \frac{9}{23}, \frac{9}{12}, \frac{9}{16}$ → $\frac{9}{12}, \frac{9}{15}, \frac{9}{16}, \frac{9}{19}, \frac{9}{23}$

3) $\frac{1}{7}, \frac{1}{11}, \frac{1}{3}, \frac{1}{4}, \frac{1}{14}$ → $\frac{1}{3}, \frac{1}{4}, \frac{1}{7}, \frac{1}{11}, \frac{1}{14}$

4) $\frac{3}{10}, \frac{3}{5}, \frac{3}{14}, \frac{3}{11}, \frac{3}{8}$ → $\frac{3}{5}, \frac{3}{8}, \frac{3}{10}, \frac{3}{11}, \frac{3}{14}$

5) $\frac{7}{17}, \frac{7}{13}, \frac{7}{12}, \frac{7}{15}, \frac{7}{9}$ → $\frac{7}{9}, \frac{7}{12}, \frac{7}{13}, \frac{7}{15}, \frac{7}{17}$

6) $\frac{6}{17}, \frac{6}{13}, \frac{6}{21}, \frac{6}{14}, \frac{6}{10}$ → $\frac{6}{10}, \frac{6}{13}, \frac{6}{14}, \frac{6}{17}, \frac{6}{21}$

7) $\frac{8}{17}, \frac{8}{15}, \frac{8}{23}, \frac{8}{12}, \frac{8}{19}$ → $\frac{8}{12}, \frac{8}{15}, \frac{8}{17}, \frac{8}{19}, \frac{8}{23}$

8) $\frac{2}{13}, \frac{2}{3}, \frac{2}{4}, \frac{2}{10}, \frac{2}{7}$ → $\frac{2}{3}, \frac{2}{4}, \frac{2}{7}, \frac{2}{10}, \frac{2}{13}$
