

Name _____

Answer Key: Wildfires

1. Wildfires are uncontrolled fires that can be triggered by factors like lightning strikes, human carelessness, or arson.
2. Strong winds can carry embers from a wildfire, starting new fires and causing the flames to spread quickly.
3. The immediate dangers of a wildfire include the fast-spreading flames and thick smoke that reduces air quality.
4. Long-term effects of wildfires include habitat destruction, harm to wildlife, and changes in the ecosystem.
5. False
