

Name _____

The 7 Main Parts of Plants

Answers to the Questions

1. Roots anchor the plant in the soil and absorb water and nutrients from the soil.
2. The stem holds the plant upright and transports water and nutrients from the roots to the rest of the plant.
3. Leaves use sunlight, carbon dioxide, and water to make food for the plant in a process called photosynthesis.
4. Flowers attract insects and birds to help with pollination, which leads to the creation of seeds.
5. When animals eat fruits, they often spread the seeds to new places by carrying them in their bodies or dropping them in different locations. This helps plants grow in different areas.
