

Name _____

Plant Shoot Systems: The Above-Ground Superheroes!

Answers to the Questions

1. The stem of a plant provides support and holds up leaves, flowers, and fruits.
2. Leaves capture sunlight and use it in photosynthesis to make food for the plant.
3. Flowers attract pollinators, which help create seeds and fruits for the plant.
4. Fruits contain seeds, and when animals or the wind carry these seeds away, they can grow into new plants.
5. Buds are small, often hidden structures that contain baby leaves, flowers, or stems, and they reveal what's inside when they open.
