Surface Area of Pyramids

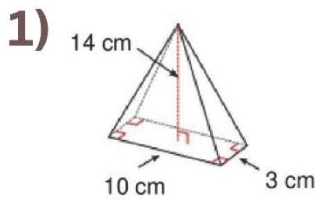

The surface area of a pyramid is the sum of the areas of all faces of a pyramid. Use this formula: $SA = B + \frac{1}{2} \times P \times l$, where B is the area of the pyramid's base, P is the perimeter of the base, and l is the slant length of the lateral sides.

Surface Area of Pyramid

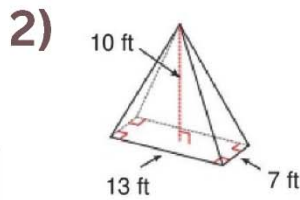

Lateral Surface Area (LSA) = $\frac{1}{2} P s$
 Total Surface Area (TSA) = $\frac{1}{2} P s + B$

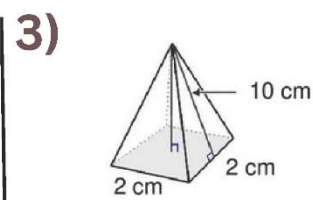

Find the surface area of each figure. Round answers to the nearest hundredth, if necessary.
