

## ANSWERS

1. a model that views disability as a physical or mental limitation specific to an individual irrespective of their social or geographical environment
2. a model that views disability as a result of barriers in society, rather than a person's impairment or difference.
3. Today, the social model is increasingly being embraced. This is significant because it has led to creating accessible physical environments; providing accessible digital content and technology; promoting awareness and education about disabilities; encouraging inclusive hiring practices and workplace accommodations; and providing services and resources for individuals with disabilities and their families.
