## Perimeter of Parallelograms and Rhombus

Perimeter of a Parallelogram

Formula: Perimeter (P) =  $2(a + b)$

Note: a & b are the sides.  
In  $\square ABCD$ ,  $a = AB = CD$ ,  $b = BC = DA$

The perimeter of a parallelogram is the sum of all its sides.  $P = 2(a+b)$  and The perimeter of a rhombus is the total length of its outer boundary  $p = 4a$

Perimeter of a Rhombus

Formula: Perimeter (P) =  $4s$

Note: s = side  
In  $\square ABCD$ ,  $s = AB = BC = CD = DA$

Calculate the Perimeter for each Rhombus.
