

Name :

Class :

Perimeter of Parallelograms and Rhombus

Perimeter of a Parallelogram

Formula: Perimeter (P) = $2(a + b)$

Note: a & b are the sides,
In $\square ABCD$, $a = AB = CD$, $b = BC = DA$

The perimeter of a parallelogram is the sum of all its sides. $P = 2(a+b)$ and The perimeter of a rhombus is the total length of its outer boundary $p = 4a$

Perimeter of a Rhombus

Formula: Perimeter (P) = $4s$

Note: s = side
In $\square ABCD$, $s = AB = BC = CD = DA$

Calculate the Perimeter for each Parallelogram.

1

P=46

2

P=48.68

3

P=52.8

4

P=60.56

5

P=60.64

6

P=50.64

7

P=51.2

8

P=64.92

9

P=53.52
